

Despite Scant Results, Bloomberg's Anti-Poverty Project Goes National

by Glenn Pasanen
Wednesday, May 18, 2011 12:00 AM

Photo by [Jeff Berman](#) The number of poor families in New York has hardly declined at all since 2006, despite Mayor Michael Bloomberg's antipoverty program.

Five years after Mayor Michael Bloomberg named a [blue-ribbon commission](#) to "analyze the causes, scope and consequences of poverty" and created a city [Center for Economic Opportunity](#) to turn the commission's "recommendations into policy and practice," it is hard to find any changes in city policy, practice or theory to ameliorate city poverty.

The city's poverty level remains where it was five years ago; the center's 40-plus pilot programs have served only a few thousand New Yorkers; and the mayor himself is on a 10th round of cutting traditional anti-poverty programs: daycare, libraries, senior and youth programs, education, among others.

Despite minimal local impact, the center has just received a federal grant to replicate some of its New York programs in other neighborhoods in the five boroughs and in cities across the

country. There is, it seems, a fundamental disconnect between the poverty commission's goal and what it has actually done to change anti-poverty policy and practice in the city.

The National Agenda

One reason for the disconnect may simply be that, even though the center is in the mayor's office, it is not so much a public program to fight poverty in New York City as a privately funded, privately run policy shop with a national focus. The center's work on [broadening the federal definition of poverty](#) is one example. .

The federal grant --a \$5.7 million Social Innovation Fund award from the federal [Corporation for National and Community Service](#) -- is another indication of Bloomberg's national focus. The grant will provide money to expand a few of the center's pilot programs to "combat poverty across a diverse cross-section of America." .

But the structure and administration of the mayor's overall anti-poverty reform plan -- revealed in rare detail in his federal grant application -- best explains the disconnect. It shows how the mayor uses private funding, national nonprofit research/policy organizations and nonprofit service providers to design, implement, administrate, and evaluate "public policy." This has, in essence, created a private, parallel universe. .

This pattern, which the New York Post recently [characterized](#) as a "shadow government" provides additional funding or some programs but also shields mayoral projects from the public scrutiny they would receive if funded entirely by taxpayer dollars. .

The [federal review](#) of the grant proposal cites some of the other problems with that parallel universe. Two expert review panels, for example, viewed some parts of the poverty proposal with much skepticism. They liked the private funds raised by the center -- the bulk of it from the [Mayor's Fund to Advance New York City](#) and the mayor's own charitable foundation -- but questioned several aspects of the proposal: its coherence, its cost-effectiveness, its lack of theory and its weak link to city government itself, among others. Nonetheless, a final review panel approved the application with enthusiasm.

The Anti-Poverty Structure

Despite Scant Results, Bloomberg's Anti-Poverty Project Goes National

Wednesday, May 18, 2011 12:00 AM

The mayor's anti-poverty effort has three partners. Together they spent \$58 million over the four years on earlier stages of the anti-poverty pilot programs. .

- The Mayor's Fund, a non-profit organization raises and distributes private money -- about \$35 million in 2009. Its president is [Patricia Harris](#) , the first deputy mayor, and the chairwoman and CEO of Bloomberg's charitable foundation, the Bloomberg Family Foundation.

- The Center for Economic Opportunity, in the mayor's office, oversees the pilot programs
- The [MDRC](#) (originally, the Manpower Demonstration Research Corp.) -- a national nonprofit, nonpartisan education and social policy research organization -- designs, manages, and evaluates much of the demonstration programs. MDRC seems to be both the brains and the brawn of the partnership.

- The federal Social Innovation Fund grant proposal was submitted jointly by the Mayor's Fund and the center. According to the proposal, six people from the Mayor's Fund, 12 from the center and 200 from MDRC will work on the pilot program.

The five-year plan included in the federal proposal (the grant is for the first year only) anticipates total funding by the three organizations of \$74.3 million, to serve 17,800 people across the nation. The Bloomberg Family Foundation will contribute \$25 million over the five years, the [Open Society Institute](#) , \$2 million. The balance will apparently come from extended federal funding, other private sources, and in-kind contributions by city agencies and nonprofit organizations. .

The first year budget of \$12.6 million (\$5.7 million from the federal grant and the balance from the Mayor's Fund) includes \$4.57 million to MDRC for selecting sub-grantees, evaluations and fiscal monitoring. One review panel called this share "too significant an investment for year one, even with a gold-plated partner like MDRC." .

The New Anti-Poverty Program

The \$74.3 million program has five parts and builds upon programs developed by the three partners since 2006. It will replicate the city's pilot programs in New York and seven other cities. The best known of these is Family Rewards, a new version of the controversial three-year ["conditional cash transfer"](#) program begun in 2007. .

Despite Scant Results, Bloomberg's Anti-Poverty Project Goes National

by Glenn Pasanen

Wednesday, May 18, 2011 12:00 AM

The original program gave low-income people cash rewards if they did various things, such as making sure their children attended school or keeping doctor appointments. The average family payment was \$3,000 per year for the first two years. .

MDRC did a [preliminary study](#) in 2010 that gave it a mixed review. Its follow-up study of program participants will continue until 2012, two years after the program's demise. .

Under the new federally supported plan, the Mayor's Fund and the center have awarded [Seedco](#), a national nonprofit organization which was a partner in the original effort, a three-year \$694,000 contract to implement the new Family Rewards program in the Bronx and Memphis, Tenn. Seedco, working with six city community-based organization, including [BronxWorks](#) and the [Children's Aid Society](#) in the Bronx, will choose 600 families in each city to be part of the program. .

MDRC will do a full scale "randomized control trial" of the program's "streamlined incentives," studying an additional 600 families in each city who do not participate in the program. .

The other components of the proposal are:

- Save USA will replicate Save NYC in New York, Tulsa, San Antonio, and Newark. The city pilot program matched every dollar of a person's tax refund that he or she put in the bank up to \$500. The program's 2,200 participants saved an average of \$636 each, or approximately \$1.4 million. The [Food Bank for New York City](#) has a \$128,000 grant to offer a similar program to about 1,350 people at four sites. MDRC will do a full-scale review.

- Jobs-Plus brings workforce training and development to neighborhoods. After MDRC found a \$1,300 improvement in wages in an earlier study of the program -- not in New York -- the city tried it in Harlem in 2009. BronxWorks, which has received a \$118,000 grant, will now replicate it at a South Bronx public housing site.

- The Young Adult Internship Program provides paid internships and employment support to "disconnected youth," those aged 16 to 24 who are neither in school nor have jobs. Three New York organizations, [Henry Street Settlement](#), [F-E-G-S Health and Human Services System College](#), and [Kingsborough Community College](#) will each receive

Despite Scant Results, Bloomberg's Anti-Poverty Project Goes National

by Glenn Pasanen

Wednesday, May 18, 2011 12:00 AM

grants of about \$168,000 to serve 200 youths over four years.

- Work Advance is a sector-based training program for low-wage workers. The city's own program has proved successful, according to a "quasi-experimental evaluation," focused on transportation-sector jobs. The program will be replicated in the city by [St. Nick's Alliance](#) (\$177,000 grant) in Brooklyn and [Per Scholas](#) (\$217,000 grant) in the Bronx. They will work with 455 and 595 trainees, respectively, over five years.

Grading the Proposal

The Mayor's Fund/Center proposal went through a two-phase review process. In the first phase, one panel rated the application "Satisfactory," the third highest of four options, and the second assessed it as "Strong," the second highest rating. A second-phase review panel gave it the highest score, "Excellent." .

The first panel found that the program design lacked "cohesiveness and clarity around a theory of change." Overall, the panel did not feel confident that the grand scale of the program, more than \$100 million over five years, would lead to "outcomes that were demonstrable or cost-effective." .

The second panel, although generally quite supportive, questioned the role of MDRC. It expressed concern that the MDRC would both be providing technical assistance and then, in effect, evaluating the success of its own program. .

The second-phase review panel, on the other hand, was very enthusiastic about the application. And for them, MDRC was the strength of the proposal. Noting MDRC had partnered with the applicant on past programs, the panel said, "The established partnership with the MDRC brings both the evaluative capacity [and] program-specific experience that would lead to a successful program."

New York's Stubborn Poverty Rate

One thing missing in the review panels' work is any mention of the fact that during the several years of the pilot programs, the city poverty rate showed no statistically significant change.

Despite Scant Results, Bloomberg's Anti-Poverty Project Goes National

by Glenn Pasanen

According to the center's own research office, using the official federal definition of poverty, which defines a family of three with income less than \$22,000 as being below the poverty line, the poverty rate in New York City was 17.9 percent in 2006 and 17.3 percent in 2009. Using the center's broader definition, the poverty rate remained unchanged at 19.9 percent over that period. A third estimate, from the private [Fiscal Policy Institute](#) says the poverty rate in 2009 was 21.3 percent, or 1.8 million New Yorkers, with half of them in deep poverty -- meaning their income was less than 50 percent of the poverty line.

Aside from a few pilot programs, the city has had little to no response to the high poverty level in recent years. On the tax side, the mayor's [raising of the city sales tax](#) in August 2009, from 4.0 to 4.5 percent -- a historic high for the regressive tax -- only added another burden for low-income households. On the expense side, the

[Mayor's Management Reports](#)

and the Independent Budget Office's

[March analysis](#)

of Bloomberg's preliminary budget show the city helping residents access federal anti-hunger money, but cutting back on well-established anti-poverty programs.

Although the number of people receiving public assistance between fiscal years 2006 and 2010 declined by 10.4 percent, from 393,800 to 352,800, the number of persons receiving food stamps rose by over 64 percent to 1,789,700 as the number of people not on public assistance jumped by 136.5 percent to 1,121,600. Experts credit this partly to the very large number of working poor in the city -- people making minimum wage or slightly more.

Homelessness among families with children has increased dramatically in recent years. The average number of families with children living in shelters has risen nearly 30 percent, from 6,671 in fiscal 2006 to 8,629 in 2010.

Spending for children's daycare and preventative services for children at risk of neglect or abuse, both programs largely used by families living in poverty, have plunged in the past five years. For example, the number of children receiving contracted preventive services declined by over 13 percent from 2006 the first four months of fiscal 2011.

According to the Independent Budget Office, childcare enrollment dropped 12 percent, from 116,000 in 2006 to 102,000 in 2010. While the mayor recently said he [would not eliminate](#) thousands of additional daycare slots, many advocates

by Glenn Pasanen

Wednesday, May 18, 2011 12:00 AM

[dispute](#)

this. Bloomberg also has proposed increases in fees parents must pay for contracted childcare, starting in fiscal 2012.

Cutbacks in Youth and Public Education

One city youth program, the [Summer Youth Employment Program](#), has shrunk over the past two years. The Independent Budget Office pointed out in March the program served more than 52,000 youth in 2009, but only 35,612 youth (out of more than 140,000 applications received) in the summer of 2010.

The proposed enrollment for summer 2011 is 17,200 -- a 67 percent cut in two years. Much of the cut stems from anticipated state and federal cutbacks, but the mayor himself reduced city funding by \$3.2 million, or 9 percent, from 2010. The city is [seeking private money](#) to pick up some of the slack.

The fiscal and program disconnect between the Mayor's Fund/Center research/demonstration project and the city's everyday policies is clearest, however, in public education. As the Independent Budget Office notes, for "the second year in a row the Bloomberg administration has presented a budget that would decrease the number of teachers and classes (thereby increasing class size) and cut other school services.

In dollar terms, over the two-year period, -- fiscal years 2011-2012 -- public school classroom cuts will total \$364 million.

Private vs. Public Policy

The federal grant to the Mayor's Fund and the Center for Economic Opportunity raises more questions than answers about city anti-poverty policy. This 10-year (2006-2016) mayoral experiment in national urban anti-poverty policy -- targeting fewer than 18,000 individuals -- may be "scattershot" or it may be "extensive and rigorous," but so far it has had little or no effect on poverty in New York.

Designed and controlled mostly by a national nonprofit organization, funded mostly by private philanthropy, implemented by national and local nonprofits, the demonstration will continue

Despite Scant Results, Bloomberg's Anti-Poverty Project Goes National

by Glenn Pasanen

Wednesday, May 18, 2011 12:00 AM

essentially independent of city public agencies. In fact, Bloomberg sees these partnerships and programs being institutionalized in each city. He envisions a kind of long shadow government so that "a change in government leadership would not disrupt the dialogue and joint efforts."

The larger question is whether the apparently exclusive focus in the mayor's office on the privatization of policy reforms ultimately translates into effective public policy.

(Correction: The April [Public Finance column](#) incorrectly reported property tax assessment increases for one, two and three-family houses are "phased in over five years, but with limits on total increases." Rather, increases are recorded each year, to a limit of 6 percent each year, and a five-year limit of 20 percent. The article has been corrected.
