

Headlines: Damage and Recovery From Sandy

Posted on Oct 31, Posted by [Mike Muller](#) Category [City](#)

Superstorm Sandy left at least [2 million homes](#) and businesses across the state and about [80 0,000 customers](#)

in the city and Westchester remained without power yesterday.

[More than half](#)

of Staten Island is without power, and over a quarter of Manhattan is in the dark. In Manhattan there are

[no streetlights](#)

South of 25th St. on the Westside. The substation in the East Village that exploded was designed to withstand a 12.5 foot surge but was

[hit with a surge of 14 feet](#)

. Customers served by underground lines in Brooklyn and Manhattan are likely to have their power

[restored within four days](#)

. Bloomberg promised "a very

[heavy police presence](#)

" in the darkened neighborhoods. Thirteen people have been

[arrested](#)

for crimes that included looting.

The [death toll](#) for the city is now 22. Untreated [sewage](#) is flowing into waterways from more than a dozen locations around the city. A

[crane](#)

still dangles from a skyscraper in Midtown and could be there for weeks. The World Trade Center is

[flooded](#)

.
[Sand is piled](#)

up to 2 feet high on the Coney Island boardwalk. At least

[111 homes](#)

were destroyed by fires in Breezy Point, Queens in a blaze among the worst residential fires in New York since the Fire Department was established in 1865.

Much of the Tristate region has been declared a major disaster area, and [FEMA](#) will distribute billions of dollars in aid, which will be a test for the troubled agency. Many homeowners who

thought their

[insurance policies](#)

covered floods are likely to have been mistaken - a common error - while others' policies have lapsed or won't cover all the damage.

The MTA is [unaware of any permanent](#) damage to the system but is still offering no estimate for when service will be restored. Buses have [started running](#)

on some routes and could return to full service by sometime today.

Many are hoping the storm will finally push New York to [prepare for climate change](#). "Three of the top 10 highest floods at the Battery since 1900 happened in the last two and a half years," Ben Strauss, director of the sea level rise program at the research group Climate Central in Princeton, N.J. "If that's not a wake-up call to take this seriously, I don't know what is." Gov. Andrew M. Cuomo said the state should consider a levee system or storm surge barriers, although Mayor Bloomberg says he is focusing on recovery for the city. Some individual parts of Sandy and its wrath seem to be

[influenced by climate change](#)

, several climate scientists said, but it's not clear that can be said for the storm itself. Sandy [broke coastal flood records](#)

for New York City by more than three feet above the previous record and more than double the range between the previous top ten.
