

The direct losses to New York and the United States from the WTC attack are incalculable. Yet, as the first anniversary comes and goes, the calculations go on apace.

More than two-thirds of the 2801 victims, or at least 1946, died on the upper floors near or above where the planes crashed: the top 19 floors of the North Tower and the top 33 floors of the South Tower. With the firefighters (343), the police and other rescue workers (about 90) and the victims from the two planes (157), and that accounts for about 90 percent of those who were killed.

Cantor Fitzgerald, the bond trading firm, lost 658 employees, by far the greatest number. Other companies and their losses:

- Marsh and McLennan (the insurance firm) 295;
- Aon (another insurance firm), 176;
- Fiduciary Trust International (a financial firm), 87,
- the Port Authority, 75;
- Windows on the World restaurant, 73;
- Carr Futures, 69;
- Keefe, Bruyette and Woods, 67;
- and Sandler O'Neil and Partners, 67.

All these were on high floors in one of the towers. Risk magazine, the trade bible of derivatives industry, which defined much of finance in the 1990s, was having a conference at Windows on the World. Everyone in attendance, including many high executives, perished.

Given the firms for whom many of those in the World Trade Center worked (as well as the large number of fire fighters and other rescue workers) the other demographic facts should not be that surprising. The victims were overwhelmingly male (about 75 percent), young (many under 40, most under 50), and white (about 75 percent). Only about eight percent were black, nine percent Hispanic, and about six percent Asian. About 75 percent were born in the United States; the rest came from many countries. Together New York and New Jersey accounted for about 87 percent.

9/11/01-02: A Demographic Portrait Of The Victims In 10048

by {ga=abeveridge}

Friday, March 01, 2002 03:42 PM

We now know that the Upper East Side had the most losses (44), while Hoboken, NJ had the highest proportion of loss of any area, losing 39 residents, or about one per thousand. The number is probably even higher if parental addresses are taken into account. It is not surprising that many of the victims lived in very affluent parts of the metropolitan area, including the Upper East Side and Basking Ridge New Jersey.

But those working at 10048 represented many aspects of New York City society -- the wealthy older executives at the Risk conference or running some of the firms, the young traders on the make, the lawyers, the computer techies, the immigrants working in the service fields. After 9/11, 10048 is no more.

- [US Census Bureau](#) -- The Census Web site is the premier site for data from the 2000 and earlier censuses, and from a variety of other sources. The site is very well indexed and has a very good search engine. You can order data, download data, make maps, download tables and publications, view publications, etc. As with any source it may have both more and less than you want for any specific use.
 - [American FactFinder](#) -- The American Fact Finder is meant to be the Census Bureau's main access point to data from the Censuses, the American Community Survey and a variety of other sources. Some criticize it for being hard to use for comparisons from one area to another. For a quick number or two it works like a charm.
 - [US/NYS Departments of Labor](#) -- Another exemplary source is the Local Area Unemployment Statistics unit of the US Bureau of Labor Statistics. Each month the Bureau, in a joint undertaking with the State, provides county by county estimates of the employment status of the working age population.
 - [U.S. Commerce Department](#) -- A comprehensive handle on where and how New Yorkers earn their livings. Also features information on Big Apple employers, salaries, industries and their revenues. Especially recommended is a database maintained as part of Commerce's Regional Accounts.
 - [New York Metropolitan Transportation Council](#) -- One of the more ambitious online undertakings in making regional and city statistical data. Contains data on population, employment and income, to name a few. Not always easy to use, but well worth the effort.
-

Other Recommendations:

- [New York City Department of Health](#) -- Though the website of New York City's

Department of Health is utterly confusing, their annual publication, "Summary of Vital Statistics for New York" is indispensable for would be students of population dynamics. And it's free. Call the Press Office at 212-788-5290 and ask for the Office of Vital Statistics and Epidemiology. Persevere.

- [New York City Department of City Planning](#) -- The Department of City Planning has begun to update the data based upon Census 2000. Following the links and you can find discussion of changing New York City and some PDF maps.

- [New York City's Housing and Vacancy Survey](#) -- Every three years or so the US Census Bureau provides New York City with a census-type survey of the city's households. Mandated by the rent regulation law, it contains much that is of interest to those concerned with social and economic change at the borough and neighborhood level. A compact disc containing the microdata files for the 1991, 1993 and 1996 surveys can be purchased from the Census Bureau. The 1999 survey tables and data re available for download.
